

# Simple Slime Recipe

## Ingredients / Supplies:

- 1 bottle (4-5 oz) of school glue (white or clear)
- ¼ cup warm water
- food coloring
- ½ tsp baking soda
- 1 ½ - 2 tbsp. contact solution
- bowl
- spoon

## IMPORTANT

- This recipe uses chemicals, so adult supervision is required.
- Wash your hands before and after making and playing with slime.
- And if you have sensitive skin, use gloves when making and playing with slime.

## Directions:

1. Pour entire bottle of glue into bowl.  
(Note: This will take a minute. Be patient and get as much glue out as possible.)
2. Add warm water to the glue and mix well.
3. Add a few drops of food coloring to the mixture and mix well.
4. Add the baking soda and mix everything really well.
5. Slowly add in the contact lens solution and mix thoroughly.  
(Note: You don't want to add too much of the solution or the slime will get too hard. Keep mixing and then pick up the slime and knead it with your hands. The slime may stick to your hands at first, but keep kneading it until it takes on the desired consistency. This may take a few minutes.)
6. Optional – if you have other ingredients, such as glitter, beads, foam balls, plastic confetti, etc. – try mixing them into your slime for added interest.
7. Store your slime in an airtight container or bag.
